

## 1. Ubuntu Commands Practice

1. **ctrl + alt + T** - For opening Terminal

2. **mkdir <foldername>**

If you want to make folder at a certain location, write command-

**mkdir practical1**

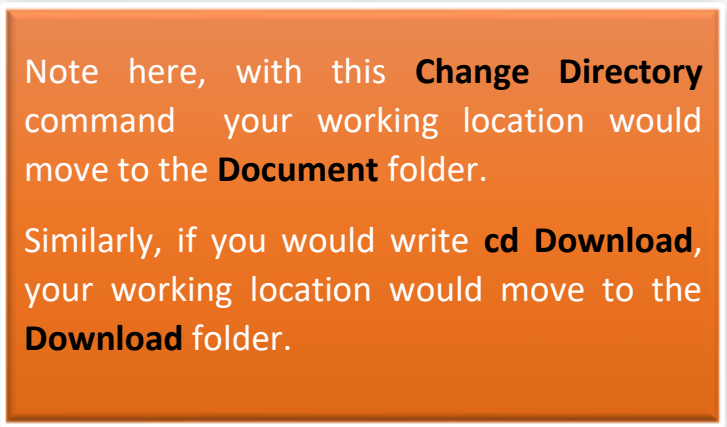

Note here, with this command folder would be created in the **Home Directory** by default.

3. **cd <foldername or directory>**

If you want to go to a particular directory or folder, write command -

**cd Document**

Note here, with this **Change Directory** command your working location would move to the **Document** folder.

Similarly, if you would write **cd Download**, your working location would move to the **Download** folder.

#### 4. **touch** <filename>

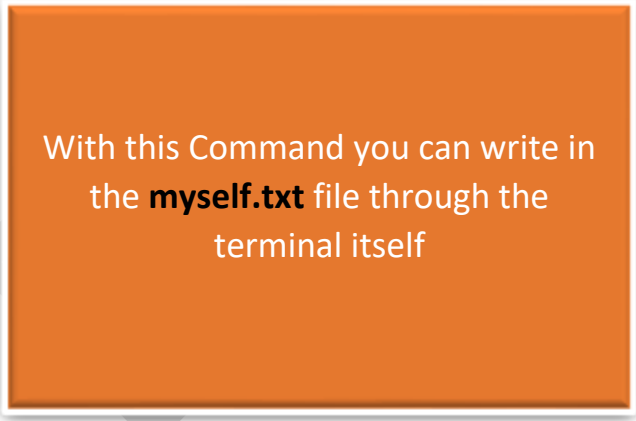

This command would create a file in the current location or folder.

**touch myself.txt**

#### 5. **cat** > <filename>

After writing this command in terminal, you can write in the file.

**cat > myself.txt**

With this Command you can write in the **myself.txt** file through the terminal itself

*After typing your content, press **ctrl + D** to save it.*
